

Advanced Tracker Technologies Inc.

Windows 95/98 Clients

Symptoms

Client workstations running Windows 95 or 98 may experience some difficulties connecting to a SQL Server 2000 data source after installation of new versions of Employee Tracker.

Solution

Locate the atCLAdmin.Exe application, which should have been delivered to the same folder with the Etp.Exe application. Create a shortcut to the atCLAdmin application, then right-click on the shortcut and select properties. From here, add the command line parameter clientfolders after the target. E.g.

```
"C:\Program Files\Etp\atCLAdmin.Exe" clientfolders
```

Run the shortcut and set both the Data Template File Repository and the Client Connection File Location to the Windows System folder, typically at C:\Windows\System.

Once this is complete, click [Ok] and the workstation should be able to connect without problem.
