Advanced Tracker Technologies Inc.
Employee Specification Bucket Views

Overview

This document discusses the new feature available on all three flavours of Employee Specification Buckets within Employee Tracker, which became available starting with software released in 2009.

The Views allow for users to save commonly used combinations of the various specification bucket elements, and have the buckets recall those exact selections very quickly.

The Views interface is found at the very top of the Employee Specification Bucket window, giving a drop-down box for selection, and three buttons for administration.

The [New…] Button

Clicking this with your criteria set will allow the user the enter an identifying description for recall later on.

The [Update] Button

This will update the currently select view to refresh with the current criteria.

The [Delete] button

This will remove the view from the user profile. Once deleted, views cannot be restored.
