Advanced Tracker Technologies Inc.
Inquiry Tracker

October 30, 2007

1. Inquiry Employee will now maintain it's setup state for the Minimize ability. (Wo.25123)
2. When setup for Shop Tracker, the scan IN or OUT with Adjust Time now functions as expected. (Wo.26650)
3. Corrected focus related issues when scanning Labor information. (Wo.29285)
4. All available options can now be setup independently for both the Inquiry Employee and the Web Interface. (Wo.28960)
5. Both Inquiry Master and Employee now support the NODATECHK command line argument which will suppress checking for short date format compatibility (Wo.30905)
6. Department transfers have been verified and now work as expected. (Wo.30959)
7. Removed redundant code in an effort to reduce database access. (Wo.31272)
8. Now supports a user-defined Multi-Field Transfer. (Wo.31235)
9. Labor Scanning can now be performed with a touch-screen or scanning device. (Wo.31243)

March 8, 2006

- Overhaul of the Flat-labor entry screen, for a better all around user experience.
- Option to display labor elements (work orders, direct labor, etc.) as code or description.
- Labor element selection screens now maximize for the best use of screen resolution. The number of buttons per screen is dynamically calculated to coincide with the adjustment in resolution.
- Direct labor codes selected for a particular work order can be sorted via sequence within the work order routing steps.
- Time bank balance display now correctly determines the open/close state of a particular bank.

January 3, 2006

- Decreased the loading time required to display employees' Time and Attendance transactions
- Flat Labor entry was not acting on the proper shift date.
